EXAMINER'S STATEMENT OF REASONS FOR ALLOWANCE

1. **Best U.S. Reference: Swartz et al., US 6,837,436 B2**, teaches a portable terminal in wireless communication with a central host for retrieving data files and providing full graphics and audio support. The portable terminal having a machine code reader to assist in recording the items selected from a shopping list and for receiving product related information for items on the shopping list. The portable terminal may also display a simulated store layout and product location and map to assist an operator in locating specific items on the list. The portable terminal may display product information such as price, product name, quantity and nutritional information. Swartz does not teach the ability to read a tag located on a pallet.
2. **Second U.S. Reference: Swan et al., US 6,901,304 B2**, teaches reading and writing to a tag on a container, a pallet, a truck or trailer, an airplane, a ship and a railroad car. Swartz discloses that the tag is an RFID tag and information read from the tag, using readers positioned in storage location, shipping and receiving areas, with truck or other moving vehicles or read using hand held device, may be used to confirm the location, identity or completeness of a shipment in correlation with order and shipping documents. Swan teaches identifying a specific transport vehicle for a shipment and verifying that the items were loaded onto the correct transport vehicle. Swan does not teach that the tag on the pallet has an identity number and weight of the pallet.
3. **Third U.S. Reference: Francis et al., US 6,600,418 B2**, teaches a transport vehicle with an RFID interrogator for moving objects having RFID tags and providing the operator with feedback as to the identity of an object being moved, the location of the transport vehicle and any error in carrying out the pick or movement instructions and may display a map and/or a set of directions to the pick item location. The information transmitted from a pallet mounted tag may include the identity of the pallet, the weight of the pallet and identification of the items on the pallet. Francis does not teach that the RFID tags can record temperature and shock.
4. **Fourth U.S. Reference: De Wilde, US 2004/0069850 A1** teaches RFID tags that may be used to measure and record temperature and shock.

5. **Fifth U.S. Reference: Spriestersbach et al., US 7,020,494 B2** teaches a location context-aware mobile system that determines the location of a mobile device and forklift. Spriestersbach further teaches using the forklift location context-aware system and the pallet ID from the RFID tag mounted on a pallet to generate location contextual information for a particular pallet.
6. **Sixth Reference: NPL_RFID_IEC_18000** teaches that RFID tags and readers operate using radio frequency (RF) where RF selected is selected from the group consisting of 125 KHz, 13.56 MHz and 800-900 MHz.

No prior art cited here or in any previous Office Action fully anticipates nor renders the claims obvious either alone or in combination. Independent Claims 1 and 22 provide for a method and system for filling an order from a pick list, reading the RFID tag from the item and comparing it to items on the pick list to determine if the correct item is being added to the pallet. Updating the pallet mounted RFID tag with information regarding the item, its description, order number, time stamp of when the item was added to the pallet. Furthermore, the Examiner is in agreement with Applicant's argument that the combined art does not teach ***"preventing the moving device from moving upon an item not on the list being placed on the pallet," "providing a manual override function to allow the moving device to move,"*** and ***"adding a notation that the manual override function was utilized."*** The Examiner is in agreement with Applicant's other argument that the combined art does not teach ***"The locations of the other product moving devices and the blocked aisles [are] communicated to the product moving device from a master computer system that receives information indicative of the other product moving devices and of the blocked aisles utilizing the RFID readers located within the store."*** Therefore, the combinations of limitations, clearly presented in the claims of this application are novel, unobvious and allowable.

Conclusion

7. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled **"Comments on Statement of Reasons for Allowance."**
